

Spring Branch ISD Technology Administrator Survey July 2005

A technology survey was conducted electronically during the July 2005, SBISD Administrators Workshop. Following a two hour presentation from the Technology Services Department administrators completed a survey on technology issues. The survey was designed to provide baseline information to evaluate department services and help in determining future department objectives. The survey included 17 questions with a comment section for providing additional information or to address concerns not covered in the questions.

The survey results are provided in a table and chart form for review (see link below). The tables include the question asked, the answer choices administrators had to select from and how they responded. The data is reported by the following categories:

- All (The total of all of the respondents to the survey)
- Elementary Administrators
- Middle School Administrators
- High School Administrators
- Department Administrators (District Level Departments)
- Other

There were a 118 surveys completed by all of the administrators. Some of the findings from the survey show that 95% of our administrators use computers at home for school related activities with 64% having DSL or Cable for connecting to the internet. Almost all of the respondents felt that technology enhances learning and increases student motivation (99%). This past year 93% of the administrators reported they attended at least one hour of technology training with 25% attending more than 7 hours. When asked about sending someone to district level technology meetings almost 96% agreed to support monthly meetings. The rating for response time to technology problems was very high with almost 90% giving a rating of good and excellent.

The last question asked administrators to rank in priority initiatives/purposes for how money she be spent on technology. They were to rank eleven items from 1-11 with one being the highest priority. The top three results came back with student computers being first, followed by a Help Desk and then Technology Applications Classrooms.

Please review the tables and charts to review the responses from the survey.
