Design Thinking is a methodology used to solve complex problems, and find desirable solutions. A design mindset is not problem-focused, it's **solution focused** and action oriented towards creating a preferred future or human-center outcome.

Design Thinking work in SBISD schools largely focuses on critical areas that will impact the world of 21st Century education.

- Professional Development

- Development & Adaptation of Curriculum

- Development of assessments for research, evaluation and real-time classroom application

- Repeatable, scale models for system-wide dissemination

How might we redesign our approach to curriculum to center around the needs of teachers and students?

How might my classroom be redesigned to better meet my students' needs?

How can we create 21st Century learning experience at school and beyond?

At its core bringing design thinking to K-12 is an issue of **equity**. Through the process of design thinking, learners (adult & child alike) discover that they have **voice & power** to change learning experiences and the larger world.
