

Genius Rotations: Elementary Track (2nd - 5th Grade)

**Play-Well
TEKnologies**

**Mudding with
LEGO Belt-Drive
Jeeps!**

Off-roading is a popular thing to do for many folks, but some take this to extremes. There are some people who like to go 'mudding' which is driving a jeep into swamps and mud pits to see how far they can go without getting stuck. We'll design and drive our jeeps through incredibly deep mud puddles, up rough hills, and through streams to see how far we can go!

CookLearnGrow

**The Science of
Chocolate
Mousse**

Join CookLearnGrow at Genius Day where kids will have fun learning about the science involved in making Chocolate Mousse! Using hands-on cooking as a teaching tool, CookLearnGrow stirs up batches of food literacy while boosting self-confidence, creative inspiration, and lifelong skills...not to mention lots of fun and yummy memories! Because cooking enriches academics, CookLearnGrow helps children succeed, both in the kitchen and in life.

Mad Science

Super Structures

Calling all junior engineers! Test out the basics of architectural design and structural engineering in this hands-on class about structures. Explore how triangles, arches and bridges shape our structures and apply some engineering to your very own bridge.

**Art Workshop –
Stephanie Walton
(WCE)**

**Genius Day in the
Art (Car) Zone!**

Ever wonder what it takes to create a full scale art car? Mrs. Walton has her own beaded art car and her 5th graders participate in creating a painted art car each year at Wilchester. She can tell you about her own art car and answer any questions you might have about creating your own with your family, school or organization!

Mrs. Walton will have mini cars that students can paint, glue, collage, and build on to create their own mobile piece of art!

Check out the Houston Art Car Parade on Saturday, April 13, 2019!
